Step 1 - Clean & Protect

The first step for bringing plastics back to life begins with Novus 1: Plastic Clean & Shine. The polish gently cleans all plastics, leaving a smooth, clean, and greaseless shine without scratching. Novus 1 polish contains no abrasives and harsh chemicals, and is formulated to resist fogging and fingerprint marks, repel dust and eliminate static.

How to polish plastics:

1. Shake well. Test in an inconspicuous area.
2. If the surface is extremely dirty, apply Novus 1 liberally and wipe using long, sweeping strokes with a clean, soft, lint-free cloth immediately. Do not use pressure because dirt particles may scratch the plastic.
3. Reapply using short, circular motions with a clean portion of the cloth.
4. When surface is thoroughly clean and uniformly covered, buff to a slippery glaze with a clean portion of the cloth. Surfaces buffed to a high glaze are more resistant to dust and future scratching.
5. Reapply Novus 1 regularly to maintain the anti-static, smudge and scratch resistant properties.

Step 2 - Restore & Refinish

The second step for restoring plastics is applying Novus 2: Fine Scratch Remover, which eliminates fine scratches, haziness and abrasions from most plastics. This product is designed to remove the damage caused from wear and tear instead of filling it in and buffs out quickly. With repeated use, Novus 2 restores faded and discoloured plastics.

How to restore plastics:

1. If the surface is dirty, clean with Novus 1 before applying Novus 2.
2. Shake well. Test in an inconspicuous area.
3. Apply Novus 2 liberally. Using a clean, soft cloth, polish with a firm back-and-forth motion at right angles to the scratches.
4. Keep the cloth saturated with polish at all times. Greater pressure may be required on deeper scratches.
5. When the worst scratches have been polished out, reapply Novus 2 uniformly in a circular motion to the entire surfaces using short, circular strokes and light pressure. Allow to dry to a light haze.
6. Using a clean portion of the cloth, buff the surface to a slippery glaze using firm, short strokes. This procedure is essential to achieve the best results.
7. For heavy scratches, multiple applications of Novus 2 or an application of Novus 3 may be required.
8. For best results, follow with Novus 1 polish.

Step 3 - Repair & Prepare

The third and final step is to use Novus 3 Heavy Scratch Remover to repair badly damaged plastics and acrylics. The Novus 3 product removes heavy scratches and abrasions from most acrylic surfaces and is recommended when the damage is too severe to be restored with Novus 2 Fine Scratch Remover.

How to repair plastics:

1. Remove surface dirt and dust with Novus 1.
2. Shake well. Test in an inconspicuous area.
3. Apply Novus 3 liberally. Using a clean, soft cloth, polish with a firm back-and-forth motion at right angles to scratches. Keep the cloth saturated with polish at all times.
4. Continue polishing until only fine scratches remain.
5. **IMPORTANT:** Using cloth, remove all remaining polish.
6. With clean cloth, apply Novus 2 in a circular motion uniformly to entire surface. Polish using light pressure until dried to a light haze.
7. Using a clean cloth, buff the surface clean.
8. For best results, follow with Novus 1.
