

# Tivar DrySlide

## Tivar BlueLine

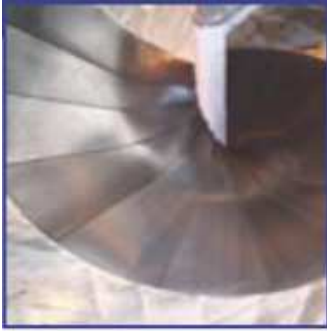

Tivar DrySlide is a PE-UHMW material with optimised sliding properties. With its antistatic and superior wear properties, Tivar DrySlide can be used wherever other materials reach their limit.

## Advantages

As an effective lining material, available to suite any style of chute, straight bends or spiral, Tivar DrySlide eliminates the need for ongoing costs and increasing the productivity of your hub / facility.

## Benefits

No need to polish or lubricate the Tivar DrySlide – it has a dry lubricant that does not transfer onto the parcel. Tivar DrySlide is an excellent wearing material that will last and last in typical parcel handling chutes.

### Key Benefits at a Glance

- ❖ Extreme low coefficient of friction reduces sticking and parcel hang-ups
- ❖ Not affected by humidity, no more jams on your line
- ❖ Reduce sorting times as there is no need to polish or lubricate the chutes
- ❖ Increase speed and productivity
- ❖ Material is antistatic and UV stabilised for outdoor use

### Typical Application Fields

Lining for steel chutes (both new and retrofit), linings for transfer walls, linings for slides.

### Product Availability

- ❖ All linings will be custom designed to meet specific needs
- ❖ Lining will allow an easy retrofit into any chute configuration
